WARNING

- The Hybrid Kit is for outdoor use only; in a closed space, it must ALWAYS be connected to a chimney flue.
- You can light the gas burner even after using the oven with firewood.
- Clean the oven floor carefully before taking the lid off the Hybrid Kit to keep ash or food residue from clogging the burner holes.
- We strongly advise against burning wood and gas at the same time because:
 1. The combustion residue could obstruct and damage the burner holes.
 2. The key to maximising combustion in Alfa ovens is to use only one fuel at a time, so burn either gas or firewood.

The kit components

The kit is entirely made of AISI 441 stainless steel resistant to high temperatures. It comes with a wood rack **(A)** and a lid **(B)** that protects the burner from combustion residue.

Instructions for use

- Shut off any gas source near the oven.
- When the oven is cold, cover the burner with the special lid supplied with the kit.
- For positioning **(fig. 1)**:
 1. The lid has a side slit where you can fit the peel.
 2. Push the peel into the slit and put the lid onto the gas burner, slide the lid until it touches the combustion chamber.
- **WARNING:** Remove the lid with the help of the peel and ALWAYS when the oven is cold.
- Place the wood rack on the oven floor on the opposite side from the gas burner;
- NEVER put the fire on the gas burner.
- Light the fire on the wood rack in the centre of the oven floor. **(fig. 2)**
- Move the fire across from the gas burner and cook as if it were a wood-burning oven. **(fig. 3)**
